

The 4Cs

Carat

Diamonds and other gems are weighed in carats. 1 carat is equal to 0.2 grams. Carats are divided into points. 1 Carat= 100 Points

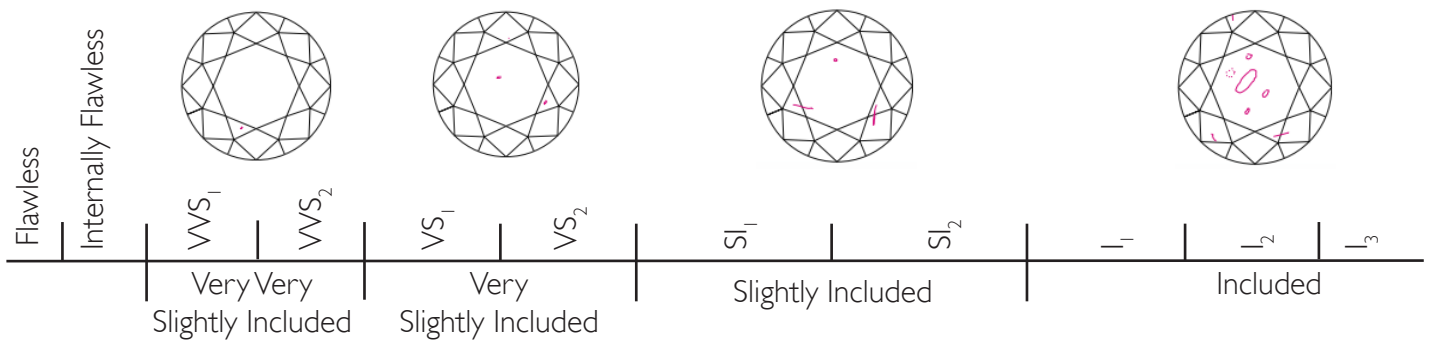

Color

Color is the first quality you see. Diamonds that are colorless and near colorless are valued more than diamonds with faint color.

Clarity

The clarity of a diamond describes inclusions(interior) or blemishes(exterior) in or on a diamond. Diamonds that have no inclusions or blemishes are valued more than diamonds with inclusions.

Cut

The cut of a diamond determines how brilliant it is. The better cut the diamond, the more sparkle it will have.
